

## CONTACT

### EMAIL ADDRESS

nightorbit.official@gmail.com

### PHONE NUMBER

03089649612

### LOCATION

Lahore, Pakistan

### REPOSITORIES

github.com/nightorbit

## EXPERT STACK

- Full-Stack Engineering
- Firebase Node Architecture
- Cloud Infrastructure Security
- Asynchronous JavaScript
- OSINT & Cybersecurity Logic
- Automated Workflow Scripts
- Production Environment Hosting

## EDUCATION

### Advanced Computer Science Track

Focus on Core Algorithms, Array Structures, Iterative Logic, and Full-Stack Engineering Pipelines.

## VALIDATIONS

### Firebase Certified Systems Operator

Identity Access Management (IAM) & Token Control

### Google Cloud Architecture Associate

Network Ingestion & Encrypted Communication Paths

# ANAS FAROOQ

## LEAD SYSTEMS ARCHITECT & DEVELOPER

## EXECUTIVE PROFILE

### CORE ECOSYSTEM GOVERNANCE & ENTERPRISE ENGINEERING

High-performing Systems Architect driving the development of production-grade cloud setups, secure access architectures, and real-time data nodes. Specializes in full-stack JavaScript automation and zero-downtime deployment pipelines.

**Technical Operations Management:** High-performing Lead Systems Architect recognized for engineering scalable cloud web structures, secure authentication schemas, and live asynchronous data pipelines. Combines full-stack Javascript architecture with automated terminal logic to maximize operational delivery.

**Infrastructure Architecture Control:** Directs infrastructure lifecycles, configuration rollouts, and multi-tenant authorization engines. Specializes in transforming complex logic arrays into fast production deployments with continuous performance validation.

**Enterprise Data Security:** Deeply focused on system hardening, isolated real-time log databases, and threat modeling simulations. Leverages industry-standard Firebase security rules and GCP node structures to guard active information perimeters.

## PROFESSIONAL EXPERIENCE

### Lead Systems Architect & Administrator

Jan 2024 - Present

#### NightOrbit (Gyidi) Technology Solutions

- Engineered live web-terminal interfaces utilizing structured asynchronous JavaScript, serving 1200+ secure network request tokens with 99.9% ingestion stability.
- Designed and implemented full authentication pipelines via Firebase Auth, protecting application nodes using encrypted session schemas.
- Built an enterprise administrative analytics dashboard with Firestore live database links, decreasing real-time sync delays by 40%.
- Automated credential rotation procedures and environment security parameters using native shell scripting, reducing configuration errors to 0%.

## PRODUCTION CORE PROJECTS

### NightOrbit (Gyidi) Cross-Platform Infrastructure

Active Infrastructure

Production Deployments: [github.com/nightorbit](https://github.com/nightorbit) | Cloud Engine Control

- Deployed data governance frameworks managing 5+ concurrent web applications with live metadata logging.
- Integrated cross-platform infrastructure supporting cybersecurity simulations and sandbox mockups for active performance validation.
